Subject: Opposition to rBGH

attach1

Dear Sirs:

I ask that you rescind the approval of rBGH, in reference to docket #98P-1194.

Additional production of milk per cow is simply not necessary because the cow is able to produce adequate amounts now. However, there is also compelling scientific evidence that rBGH is dangerous. Health Canada is opposing rBGH for use in Canada and many European countries also oppose its use. It causes udder infections, lameness and infertility.

Thank you for rescinding the approval.

Elizabeth C. Cox
